

Dear Professor Boolchand,

I hope that you enjoyed reading *Journal of Physics: Condensed Matter* (JPCM) [Highlights of 2010](#) collection, and trust that the content was useful and interesting.

I am writing to inform you that your article, 'Long Term aging of selenide glasses: Evidence of sub-T_g endotherms and pre-T_g exotherms', published in January last year, is proving to be extremely popular, achieving over 285 downloads to date—congratulations.

2011 looks set to be another good year for the journal—**more high-quality papers are being submitted** than ever before and global readership is at a record level in the journal's history, illustrating the quality of research published and our dedication to providing worldwide visibility.

Congratulations once again on the success of your paper, and I do hope to work with you again this year.

Best regards

Lucy Smith
