

EECE 7001 Fall Seminar

(Introduction to the Faculty)

<http://eecs.ceas.uc.edu/~wilseypa/classes/eece7001/>

The Fall Seminar Series

- Designed to help you learn of faculty expertise and active projects
- Each week two members of the ECE faculty will deliver a seminar on their active research programs
- The speakers will appreciate any question and be happy to have you ask them about their work; please try to think of a relevant question and be ready to participate in the Q&A session at the end of each talk
- As a class, please try to ensure that at least one or two reasonable questions are asked
- Ideally these talks will assist you in selecting a faculty advisor

Mechanics

- Much as I despise this, attendance is mandatory and you should bring your UC ID and sign an attendance sheet
- Sometime during the semester you are required to visit at least one faculty member to discuss their research. You must prepare and submit a 1-page report of this visit to either Dr. Niu or Dr. Wilsey
- Please be respectful of the faculty speakers
 - Be at tentative
 - Try to learn something from each speaker, they are experts and, while the immediate topic may not be your cup of tea, you may be surprised with something
- The class webpage (<http://eecs.ceas.uc.edu/~wilseypa/classes/eece7001>) contains a list of dates, speakers, and their topic title

Thesis Advisor Selection

- Ultimately you are responsible for selecting a faculty member to serve as your MS/PhD Thesis Advisor
- While this seminar series will help expose you to some of the faculty, you should consider faculty across the entire dept as possible advisors
- The dept contains a diverse faculty pool across the EE and CompE disciplines; there are many interesting ongoing projects that you will be exposed through during this seminar series. Please try to enjoy it
- [You can visit the ECE Dept webpages here](#)
